EXAMINER

JONES III, CLYDE H

ART UNIT PAPER NUMBER

2623

DATE MAILED: 09/19/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/870,100	Applicant(s) SPENCER, ROBERT L.	
	Examiner Clyde H. Jones III	Art Unit 2623	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 6/19/2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-29 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-29 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6/19/2006 has been entered.

Response to Arguments

2. Applicant's arguments with respect to claims 1-19 have been considered but are moot in view of the new ground(s) of rejection. In response to applicant's arguments on pages 11-14 of the 6/19/2006 Remarks, the newly added limitations are met by the Nations, Rosin, Brooks and Hicks references as described below.

Claim Rejections - 35 USC § 101

6. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 10-19 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 10-19 define a product comprising a machine - readable medium embodying functional descriptive material. However, the claim does not define a computer-readable medium or memory and is thus non-statutory for that reason (i.e., "When functional descriptive material is recorded on some

Art Unit: 2623

computer-readable medium it becomes structurally and functionally interrelated to the medium and will be statutory in most cases since use of technology permits the function of the descriptive material to be realized"). The examiner suggests amending the claim to embody the program on "computer-readable medium" or equivalent in order to make the claim statutory.

Claim Rejections - 35 USC § 112

7. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 10-19 are also rejected under 35 U.S.C. 112, second paragraph which contains two separate and distinct requirements (A) that the claim(s) set forth the subject matter applicants regard as the invention and (B) that the claim(s) particularly point out and distinctly claim the invention.

The specification does not teach or suggest any product having instructions stored on a machine readable medium See MPEP 2171.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-7, 10-16, 19, 20-26 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nations et al. (US 6,879,808 B1) and Rosin (US 6,072,483).

Regarding claims 1, 10 and 20, Nations teaches the method (and corresponding, product [and corresponding processor instructions (col. 8, lines 55-58; col. 7, lines 10-11)], and system [10 - fig. 1 and fig. 3]) comprising:

receiving a digital broadcast (satellite) signal to a digital television receiver (col. 5, lines 40-41, lines 59-62) in a first computer (127 -fig. 3) (col. 8, lines 66-67), wherein the digital broadcast signal includes content (video movie; col. 7, lines 9-13; col. 4, lines 41-42) and enhanced (expanded/related; col. 7, lines 61-64; col. 10, lines 20-23) content data (information related to the requested information, e.g., related web site content; col. 10, lines 2-3, 20-23, 34-42), and wherein the enhanced content data includes triggers (Nations inherently discloses triggers or instructions that initiate an action in order to update the cache and prompt user 128 – fig. 3 when the related/enhanced information is received; col. 10, lines 40-43, 46-48, 15-19) and announcements (message notifications/prompts indicating additional information is available; col. 10, lines 15-19, lines 46-48) to synchronize (display concurrently with the video movie) the digital broadcast signal content with content (enhanced content) on a display 35 (display of 32 or 34) – fig. 3 (col. 10, lines 51-53; col. 5, lines 60-62; col. 6, lines 13-16);

processing the digital broadcast signal to extract the enhanced content data (col. 10, lines 40-42; col. 11, lines 57-67; step 154 – fig. 5);

storing the enhanced content data in a web browser cache (smart local cache 128) (col. 10, lines 1-8, 61-65; col. 6, lines 47-50; col. 7, lines 10-13; in which the cache 128 stores web pages used by web browsers);

interrogating the web browser cache with an application program interface (software instructions used to interface the cache memory with the transmitter/receiver 126 – fig. 3; col. 8, lines 59-65) (col. 6, lines 12-16; col. 8, lines 49-51; in which a request for information causes the API software to interrogate/search the local cache for determining what information/data received should be downloaded or used to update existing cache data; col. 9, line 64-col. 10, line 8; col. 8, lines 55-58);

providing the enhanced content data to a personal web server (local proxy server 127 – fig. 3) responsive to the application program interface interrogating the web browser cache (API software determines what information/data received should be downloaded or used to update existing cache data; col. 9, line 64-col. 10, line 8; col. 8, lines 55-58; once stored cache data is provided to the proxy server for delivering the updated data to web browsers of clients without requiring access to the Internet; steps 154-156 – fig. 5; col. 6, lines 12-16);

storing (proxying) the enhanced content data in the personal web server (col. 6, lines 11-16; col. 8, line 47-col. 9, lines 5); and

providing the enhanced content data stored in the personal web server to a client device (34, 35 – fig. 1) via a personal (local proxy server) web page hosted by the personal web server (the cached web page is provide to the browser of the client/internet appliance 34 from the proxy server when the internet/broadcast

Art Unit: 2623

connection is not active; 145 – fig. 4; col. 6, lines 11-16; col. 5, lines 59-61; col. 7, lines 10-11; col. 8, line 66-col. 9, line 5; col. 10, lines 3-8), comprising;

loading the personal web page on the client device (col. 6, lines 13-16; col. 10, lines 1-8) and data is received from a synchronization server (service software) in the first computer (col. 9, lines 64-col. 10, lines 8; col. 10, lines 46-65; col. 10, lines 44-45; in which video movie content is received and related information, i.e., web pages, is cached and the synchronizing software/server updates/synchronizes the cache with new information, e.g., web page data, used to provide current/synchronized web page information), and;

machine readable media to store instructions (col. 8, lines 55-58; col. 7, lines 10-11).

However, Nations fails to disclose a synchronization client is created as an object window and updating the object window via the synchronization client when enhanced content data is received.

In an analogous art, Rosin teaches it desirable to use a synchronization client (software for updating a client) created as an object window (windows 1, 2, 3 – fig. 7 in a page) (col. 7, lines 29-32; col. 8, lines 49-55; col. 14, lines 33-35, 49-56; col. 16, lines 8-11) and updating the object window via the synchronization client when enhanced content data is received (col. 16, lines 8-11; col. 14, lines 49-56; col. 13, lines 14-18; col. 7, lines 21-25) for the purpose of providing an active/dynamic interface for the user while providing links/content from various sources in accordance with user's usage and viewed subject mater (col. 14, lines 49-53; col. 13, lines 14-21).

Therefore it would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to modify the system of Nations to include a synchronization client is created as an object window and updating the object window via the synchronization client when enhanced content data is received as taught by Rosin for the advantage of more efficiently providing current/updated information that the user is likely to use (Rosin - col. 14, lines 49-53; col. 13, lines 14-21) and synchronized information that automatically updates the user/client display when more current information is received (Nations - col. 10, lines 46-55).

In regards to claims 2, 11 and 21, Nations in view of Rosin teach extracting content triggers from the enhanced content data (Nations - col. 10, lines 40-43, 46-48; in which new enhanced content, i.e., related website info, is extracted from the received transmission triggering a cache update) and providing the content triggers to the synchronization client through a network (and after the cache info is updated with the new enhanced content, the local proxy server/synchronization server can update/synchronize the synchronization client so that the new information is displayed to the user of the client device; Nations - col. 9, lines 64-col. 10, lines 8; col. 10, lines 57-65; Rosin – col. 5, lines 57-63; col. 7, lines 17-19, 21-24; col. 15, lines 33-35, lines 49-53).

In regards to claims 3, 12, and 22, Nations in view of Rosin teach the personal web server is simultaneously providing enhanced content data stored in the personal

Art Unit: 2623

web server to a plurality of client devices (the proxy server can serve any client with a web browser or multiple PCs; col. 9, lines 1-5) and the synchronization server is providing content triggers to at least one synchronization client (the local proxy server/synchronization server can update/synchronize the synchronization client so that the new information is displayed to the user of the client device; Nations - col. 9, lines 64-col. 10, lines 8; col. 10, lines 57-65; Rosin – col. 5, lines 57-63; col. 7, lines 17-19, 21-24; col. 15, lines 33-35, lines 49-53).

In regards to claims 4, 13 and 23, Nations in view of Rosin teach the client device is receiving the triggers wherein the content triggers update the synchronization client to be displaying information synchronized to the digital broadcast signal on the client device (Nations – col. 10, lines 50-53; col. 11, lines 57-59; col. 10, lines 20-23; Rosin – col. 14, lines 49-53; col. 7, lines 29-31).

In regards to claims 5, 6, 14, 15, 24 and 25, Nations in view of Rosin teach the trigger synchronization server is providing triggers to a network (Ethernet) connection by multicasting datagram (Ethernet/IP) packets to sockets (of the multiple clients 34/PCs, for updating the display information) using a transmission (Ethernet/IP) protocol (Nations - col. 9, lines 1-5).

Regarding claims 7, 16 and 26, Nations in view of Rosin teach the client device is a second computer (PC 34; Nations col. 9, lines 1-5).

Regarding claims 19 and 29, Harrison teaches the client device 34 –fig. 1 is a remote control device with a display panel (col. 5 lines 60-62; col. 9, lines 1-2; Examiner broadly interprets “remote control” to be a removable, wireless, or electronically tethered, i.e., remotely connected via some network, e.g., RF, Ethernet, etc., device used to input commands into a system, e.g., display/information retrieval request sent to user terminal 32, which reads on Nation’s Internet appliance device 34; col. 6, lines 14-17).

5. Claims 8, 17 and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nations in view of Rosin as applied to claims 1, 10 and 20 above, and further in view of Hicks, III et al. (US 2004/0255326 A1).

Regarding claims 8, 17 and 27, Nations in view of Rosin teach the client device is a second computer (PC 34; Nations col. 9, lines 1-5) and an Internet appliance (has a web browser capable of viewing web pages; col. 5, lines 60-65).

However Nations and Rosin fail to teach an interactive tablet.

In an analogous art, Hicks teaches it is desirable to use an interactive tablet (par. 21, lines 16-19) for the purpose of delivering content to a wide range of devices in a home network and for inputting commands to a server (par. 25 & 25).

It would have been obvious to one of ordinary skill in the art at the time of the applicant’s invention to modify the system of Nations in view of Rosin to include an interactive tablet as taught by Hicks for the added advantage of providing a system that

Art Unit: 2623

is more compatible with existing consumer equipments, such as graphical tablets, so that consumers can take advantage of the system as long as they have an internet capable/web device.

6. Claims 9, 18 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nations in view of Rosin as applied to claims 1, 10 and 20 above, and further in view of Brooks et al. (US 7,047,305 B1).

Regarding claims 9, 18 and 28, Nations in view of Rosin teach the client device is a second computer (PC 34; Nations col. 9, lines 1-5) and an Internet appliance (has a web browser capable of viewing web pages; col. 5, lines 60-65).

However Nations and Rosin fail to teach a personal digital assistant.

In an analogous art, Brooks teaches it is desirable to use a personal digital assistant (col. 11, lines 5-11; col. 15, lines 2-3) for the purpose of delivering personalized content to a wide range of devices/clients in a home network (col. 10, lines 55-58).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to modify the system of Nations in view of Rosin to include a personal digital assistant as taught by Brooks for the added advantage of providing a system that is more compatible with existing consumer equipments, such as PDAs, so that consumers can take advantage of the system as long as they have a internet capable/web device.

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Clyde H. Jones III whose telephone number is 571-272-5946. The examiner can normally be reached on 9-5:30 p.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chris Grant can be reached on 571-272-7294. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
